About Client

The client is based out of India has been in money service technology products segment since 2005. The client offers businesses a unique, integrated processing platform that is capable of linking multiple participants into a transaction network by adapting to a variety of payment technologies. With mobile client interfaces across multiple channels, their solution maximizes customer reach and allows users to send and receive money, pay bills and buy goods and services, wirelessly.

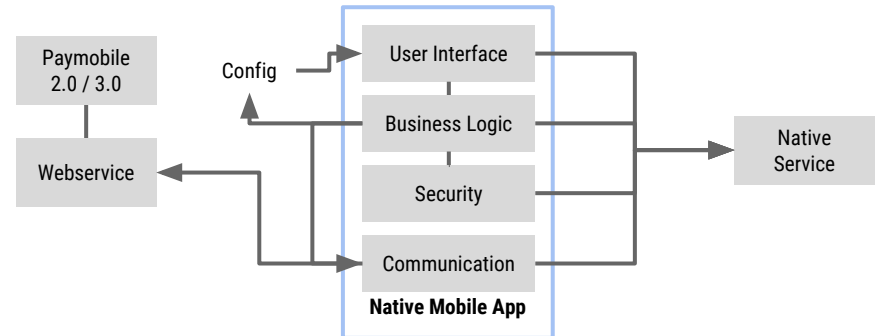

Engagement Scope

- Requirement Gathering
- Solution design
- System Testing
- Post Deployment Support
- Annual Maintenance
- Language translation
- Technical and user documentation

Business Need

This client wanted Integra to develop a Native mobile application framework with a template based approach based on a predefined set of Unique screen combinations. The client expectation was that the framework should be flexible to the extent that the business analyst of the organization should be able to design the screen flow, UI elements, validation, messages, define API's and actions based on the use cases for respective customer needs.

Integra worked closely with the client to build required framework to meet the expectation.

Our Solution

The solution follows Native application development approach with predefined UI layouts, the business logic, validations, message and screen flows are driven from the configuration.

Salient Features

- Cash-in / Out
- P2P – SVA to SVA, Unregistered
- Change Pin, balance, transaction history
